## Case performed by Dr. Feriduni – 1148 FU in 2 procedures

Scar correction in FUE performed on a 42-year old Caucasian male after FUT Minigrafts ex domo.

- NW VII, Class N
- Donor density of 76 FU/cm² occipital, 80 FU/cm² parietal, 68 FU/cm² temporal
- Hair diameter of ~50-54 microns

### Treatment plan

Follicular Unit Extraction to correct the scars on the back of the head.

### Performed procedures

1. FUE (October 19, 2016)
Scar correction in Follicular Unit Extraction with 636 FU
* 636 hair FU (mix single, double and triple hair FU)

2. FUE (October 18, 2017)
Scar correction in Follicular Unit Extraction with 512 FU
* 102 single hair FU
* 410 double hair FU

Perpendicular incisions in custom-sized blades technique (Cutting Edge blades of 0.8-0.9 mm).
Extraction performed with a 0.8 mm FUE punch with CIT Manual Punch Handle.

No microscopic preparation of the follicular unit grafts.
