

Case performed by Dr. Feriduni – 3369 FU in 1 procedure

FUE performed after 2 FUT ex domo (2014 and 2015) on a 48-year old Caucasian male with

- NW III vertex Class N
- Donor density of 92 FU/cm² occipital, 88 FU/cm² parietal, 84 FU/cm² temporal
- Hair diameter of ~60-64 microns

Treatment plan

Follicular Unit Extraction to attain an aesthetic reconstruction of the hairline and rethicken the midhead section.

Performed procedure

FUE (June 11, 2018)

Follicular Unit Extraction with 3369 FU:

* 448 single hair FU

* 2921 double + triple hair FU

HGI: 2,32

Parallel incisions in custom-sized blades technique (Cutting Edge blades of 0.7-0.9 mm).
Extraction performed by WAW-system with a 0.85 mm serrated trumpet punch.

No microscopic preparation of the follicular unit grafts.

Dr. Bijan Feriduni
